Subject: Matt Brown - AP - Libby OU5 Wood Chips

I spoke to Matt Brown this afternoon, and told him:

- 1) The wood chips were sampled in October 2007. It is unclear exactly when the data was entered into the Libby 2 database. Analytical results were reported in a July 2008 document. EPA would have had access to the data sometime between October 2007 and July 2008.
- 2) Analytical results for the archived wood chips should be available by July 15th.
